

## The Parks Wealth Report for the Week of December 15th, 2014

### On a Personal Note from Felicia Parks...

Our weekends are often busy and this past weekend was no exception. However, for one Saturday my husband and I put aside the errands, holiday shipping, laundry etc. and my children took a day off from their sports activities and busy social lives. Instead we woke up early to join two other families in Elizabeth, NJ to board the Relief Bus, essentially a mobile soup kitchen serving the less fortunate in NY and NJ. We filled the bus with soup, hot chocolate, water, bread, socks and hygiene kits and were coached by full time Relief Bus leaders on how to handle the people and situations we may encounter that day. We then headed to our destination in East Harlem, NY. I'll admit I had my reservations about bringing my children, ages 11 and 8, but at the end of the day, I knew the experiences would stay with them for a lifetime. At one point, I stood outside the bus' window watching our children smile and serve courteously to many homeless people that came to the window that afternoon. In turn, I saw many people smile with gratitude and for a moment share a connection, as a great deal of those individuals were parents themselves and wanted so desperately to better their situation and see their families again. The Relief Bus leaders are able to give them access to rehab facilities, shelters and legal aid if and when they are ready to take those steps. We served more than 500 people that day in the pouring rain and I can honestly say it was a Saturday our family will never forget.

If you are interested, information can be found at [www.reliefbus.org](http://www.reliefbus.org)

Warm wishes for the holiday season.

Best regards,

Felicia Parks

## The Markets

Ouch!

It was no fun to be an investor last week. The week prior, a commentary in *The Wall Street Journal's* blog, *MoneyBeat*, offered this insight:

"Falling oil prices are thought to be good for stocks because they stimulate consumer spending and hold down inflation. The lower costs support economic growth, boost corporate earnings, and lessen pressure on the Federal Reserve to raise interest rates. The stock market loves that mix."

That was not the case last week. A selling spree, sparked in part by concerns related to energy, led to virtually every major world stock index (every one that *Barron's* follows, anyway) moving lower. The single exception was the Shanghai Composite and that was flat.

It seems the *International Energy Agency's* prediction that demand for energy would grow more slowly in 2015, combined with the fact supply of some resources has been growing, addled investors and they sold everything but the kitchen sink. Even industries that may be helped by lower energy costs - consumer goods, consumer services, health care, and others - lost value. In the United States, stock markets delivered their worst performance in more than three years, according to *Barron's*.

Have investors lost sight of the fact the United States has a consumption-driven economy?

The *Federal Reserve Bank of St. Louis* reported personal consumption - how much Americans are spending on goods and services - was 70 percent of gross domestic product (the value of all goods and services produced) in the United States during the third quarter of 2014. Lower energy prices tend to put more money in the pockets of consumers so they can spend more and that can help the economy grow. In fact, *U.S. News* reported, "...approximately every penny decline in the price of a gallon of gasoline translates to about \$1 billion in additional disposable income for American households."

It's interesting to note consumers - a group that overlaps with investors in a Venn diagram - are more confident than they have been in almost eight years, according to data released by the University of Michigan and cited by *Barron's*.

| <b>Data as of 12/12/14</b>              | <b>1-Week</b> | <b>Y-T-D</b> | <b>1-Year</b> | <b>3-Year</b> | <b>5-Year</b> | <b>10-Year</b> |
|---|---------------|--------------|---------------|---------------|---------------|----------------|
| Standard & Poor's 500 (Domestic Stocks) | -3.5%         | 8.3%         | 12.8%         | 17.4%         | 12.4%         | 5.3%           |
| 10-year Treasury Note (Yield Only)      | 2.1           | NA           | 2.9           | 2.0           | 3.6           | 4.2            |
| Gold (per ounce)                        | 1.9           | 1.3          | -0.4          | -9.8          | 1.6           | 10.8           |
| Bloomberg Commodity Index               | -1.3          | -11.9        | -12.3         | -7.7          | -3.8          | -2.6           |
| DJ Equity All REIT Total Return Index   | 0.0           | 26.0         | 29.3          | 17.9          | 16.7          | 8.3            |

S&P 500, Gold, Bloomberg Commodity Index returns exclude reinvested dividends (gold does not pay a dividend) and the three-, five-, and 10-year returns are annualized; the DJ Equity All REIT Total Return Index does include reinvested dividends and the three-, five-, and 10-year returns are annualized; and the 10-year Treasury Note is simply the yield at the close of the day on each of the historical time periods.

Past performance is no guarantee of future results. Indices are unmanaged and cannot be invested into directly. N/A means not applicable.

**WHAT DOES THE FUTURE HOLD?** The good news is most analysts expect economic growth in the United States to continue. *The Wall Street Journal*, *The Economist*, *The Federal Reserve*, and the *International Monetary Fund* all have forecast gross domestic product growth in the United States at 2.5 to 3.0 percent for 2015. That's not quite as good as the 7 percent growth forecast for China or the 6.5 percent growth estimated for India, but it's decent for a developed nation with a mature economy.

There are factors that could hurt the economic outlook in the United States. Economists participating in *The Wall Street Journal's Economic Forecasting Survey* said a negative global event was the biggest threat to U.S. economic growth followed by slower global growth. Three of the risks *The Economist* believes could keep companies from operating at target profitability during 2015 include:

**Deflation in the Eurozone:** "A Japanese-style stagnation in the euro zone would have profoundly negative implications for global demand, especially at a time when growth in the emerging markets is also softening."

**Spillover from Syria's Civil War:** "...The prospect of [ISIS] diverting its energies from Iraq and into Syria and its neighbors (such as Lebanon and Jordan) could prompt an uptick in oil's political risk premium once more."

**Escalation of the Russia-Ukraine conflict:** "...The recently imposed trade restrictions have not only plunged Russia into recession, but also contributed to sinking industrial output in Germany... further sanctions could see Russia cutting off natural gas sales to Ukraine or the European Union (as is currently already reportedly occurring with supplies to Poland)... [these acts] would no doubt have a deleterious impact on the [Euro] region's economic recovery."

There are also factors that could improve the outlook. *The Wall Street Journal's* survey found economists believe tightening labor markets, higher wages, better consumer spending, and low energy prices could support U.S. economic growth during 2015.

## **Weekly Focus - Think About It**

"The way a team plays as a whole determines its success. You may have the greatest bunch of individual stars in the world, but if they don't play together, the club won't be worth a dime.

--Babe Ruth, American baseball player
